30 Pancakes OR Frosted Flakes Tasters Plate OR Chicken Wrap	September in National Honey Month! <p>A typical beehive can produce anywhere from 30 to 100 pounds of honey a year. To produce a single pound of honey, a colony of bees must collect nectar from about 2 million flowers and fly over 55,000 miles. This amounts to a lifetime's worth of work for around 80 bees. Although there are 20,000 species of bees on earth, only a fraction of them make honey. The species of honey bee used for commercial beekeeping in the US is <i>Apis mellifera</i>. It is one of only seven known honey bee species.</p> <p><i>This institution is an equal opportunity employer</i></p>
